

SARTHAK ROY

SOFTWARE ENGINEER

6295623945 | roysarthak16@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software Engineer with a strong computer science foundation and hands-on experience delivering scalable, production-ready software systems. Skilled in backend architecture, distributed systems, API development, database design, performance optimization, and full-stack application development. Experienced across modern web technologies, relational and NoSQL databases, cloud infrastructure, and AI-driven solutions, with a focus on building reliable, efficient, and maintainable software through clean architecture and engineering best practices.

EXPERIENCE

Software Development Engineer Intern — CEHpoint (Remote)

Nov 2025 – Feb 2026

- Built and maintained features for an internal Employee Management system supporting workflow tracking and reporting.
- Contributed to a logistics platform handling order lifecycle and shipment status.
- Developed and optimized REST APIs, improving backend reliability and response consistency.
- Collaborated with cross-functional teams to enhance scalability and code maintainability.

SKILLS

Languages: Java, C, JavaScript, TypeScript

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs

Cloud & DevOps: Docker, Kubernetes, CI/CD, Vercel, Render

Databases: PostgreSQL, MongoDB

Auth & Security: JWT, RBAC, Firebase / Supabase Auth

CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems

Tools: Git, GitHub, Postman.

PROJECTS

1. EvntMet (End-to-End)

[LINK](#)

Next.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL, Cloudflare R2

- Built a dual-sided marketplace with role-based dashboards, booking, and service workflows.
- Implemented transaction-safe booking logic ensuring consistency under concurrent requests.
- Integrated S3-compatible storage for efficient media handling and uploads.

System Design: Structured the system to separate authentication, transactional data, and media storage, improving scalability and reducing database load.

2. MailForge AI – AI Cold Email Automation Platform

[LINK](#)

Next.js 16 • TypeScript • MongoDB • Firebase • Google Gemini • Gmail OAuth2 • Docker

- Architected a scalable multi-tenant AI SaaS platform with secure credential isolation, eliminating shared secrets while integrating 2 production-grade third-party services (Google Gemini and Gmail APIs).
- Built an end-to-end AI pipeline that extracts resume data, performs structured prompt engineering, and generates recruiter-specific cold emails with configurable tone and personalization.
- Developed 8+ serverless REST APIs implementing authentication, authorization, resume parsing, AI inference, email dispatch, and campaign management using Next.js Route Handlers.
- Optimized backend performance through MongoDB indexing, bulk database operations, and efficient query design, improving scalability under concurrent workloads.
- Containerized the full-stack application with Docker, enabling reproducible builds, environment parity, and streamlined deployment across development and production.
- Applied production-grade engineering practices including zero-trust credential management, role-based access control, secure OAuth2 workflows, and modular service-oriented architecture.

ACHIEVEMENTS

- **Solved 150+ DSA problems**
- **Hackathon Finalist — AIExplains (Emergency Medical Service in Rural Areas), 2024**

EDUCATION

B.Tech in Information Technology (2022 – 2026)

Bengal College of Engineering and Technology, Durgapur

Higher Secondary Education (12th) – Science (PCMB) (2021)

West Bengal Council of Higher Secondary Education

Secondary Education (10th) (2019)

West Bengal Board of Secondary Education
